WHAT I LEARNED

Ready to Print

National Fossil Day is a special day when we celebrate fossils! Fossils are the remains or traces of ancient plants and animals that have been preserved in rocks. On this day, people all around the country learn about fossils and the amazing stories they tell about Earth's history. Some fossils are millions of years old! We can find fossils in many places, like in rocks, sand, and even underground. Scientists study fossils to learn about dinosaurs, ancient sea creatures, and even plants that lived long ago. So, on National Fossil Day, let's explore the wonders of the past and uncover the secrets of ancient life!

What You have learned so far?

WHAT I LEARNED

1. What is National Fossil Day about?

2. Where can fossils be found?

3. Why do scientists study fossils?
