WHAT I LEARNED

Ready to Print

Jane Goodall is a scientist who studied chimpanzees, which are animals like monkeys. She spent many years living in Africa, where she observed chimpanzees in their natural habitat. Jane believed in understanding animals and their behavior to protect them and their homes. She discovered that chimpanzees are very similar to humans in many ways, like using tools and having emotions. Jane's work taught us to respect and care for all living creatures on Earth.
